E-Commerce Sales Analysis

RESULTS

1) The best sales and profits are in 2023. Operational metrics (stock, delivery time, return rate) should be analyzed to ensure the sustainability of this increase.
2) Our highest sales are in the West and East regions. The lowest sales and profit are in the North. The reason for the low performance in the North region should be analyzed to determine whether it is due to a lack of demand or insufficient marketing.
3) Some products in the Office category, which generate low profit relative to sales, can be replaced with products from the other two categories.
4) The biggest declines are in February. Special campaigns, advertisements, etc. should be given for this month.
